A techno-enthusiast, eager to learn new technologies. Love to tear-apart things to understand how they work.

Summary

Skilled data scientist with around 6 years of experience in designing and developing ML models and systems across diverse industries like E-commerce, fintech, travel, retail etc. Possesses a diverse experience in collating & analyzing data. Enhancing existing models and revamping business processes as part of compelling value to key clients. Proficient in collaborating with teams of high-performing professional's for developing ML frameworks and solution for slashing costs & optimizing time for catapulting business growth.

Skills

- **Languages and Databases:** Python, MySQL, MongoDB.
- **Technical Skills:** Machine Learning, Deep Learning, NLP, Predictive Modeling, Information Extraction, Text Mining, Visualization, Chatbot Development, Text Analytics, Web Scraping, Deployment, GenAI, LLM Modeling.
- **Frameworks:** Pandas, Scikit-learn, keras, tensorflow, Huggingface, Langchain, Streamlit, FastAPI, Docker, Flask.
- **Tools/Platforms:** Flask, MLFlow, PyMongo, DialogFlow, EC2, Tensorflow, Pytorch, Sklearn, NLP, Ec2, Aws Lambda, S3.
- **GenAI :** OpenAI, Google Gemini, RAG, Vector Database.

Work Experience

Infrablok India

May 2024 –

Lead Ai Engineer

- Developed tools for conducting and mitigating different types of attacks on image classification ML Models.
- Developed data security model that detects various scanners like gibberish, prompt injection, PII, PHI etc.
- Developed an adversarial image detection model capable of identifying whether an image has been subjected to adversarial attacks, ensuring enhanced robustness and security in image processing systems.
- Led a team of 4 members to design, develop, and deploy scalable solutions, ensuring timely delivery of high-quality outcomes while fostering collaboration and mentoring team members for continuous growth.

Lentra AI

Sep 2023 – Apr 2024

Lead Data Scientist

- Developed a customer churn prediction model to forecast behavioral trends based on user activity.
- Engaged in the redaction of sensitive information from documents, including Aadhar and PAN card details.
- Created a chat application that allows customers to interactively query information from a MySQL database using natural language using various LLMs.
- Developed a system for approving credit cards based on customers' financial data.
- Engaged in developing a system for approving credit cards based on customers' financial data.
- Developed an address quality assessment system that assigns scores based on the address's accuracy and completeness.

Kapture CX

Mar 2021 – Aug 2023

Machine Learning Engineer

- Working on Template Recommender for helping customer support.
- Worked on Response classifier for social media to help agent in CRM.
- Worked on the chatbot that helps E-Commerce for answering for their queries.
- Made a ticket classification system to help customer support.
- Built a question answering system that extracts answer based on the given context.
- Built OCR masking system that masks Aadhaar, pan number for Insurance Companies.

- Built a sentiment analysis model on hotel reviews using machine learning.
- Worked on product recommender system for E-Commerce.
- Built a chatbot integrated with WhatsApp and image recognition.

Projects

Question Answering Chatbot | *Python, Elastic Search, MySQL, Flask*

- Made a Question answering chatbot for E-Commerce to answer user queries.
- Used Elastic search to save the context embeddings.
- Using Zero shot Classification to classify user queries.
- Used cosine similarity to match the user queries with FAQ'S.
- Selecting the model with better threshold between cosine similarity and zero shot classification.
- Used Flask to make API based with Input Queries.

Template Recommender | *Python, MySQL, Flask, MLFlow*

- Made a Template Recommender system for customer support.
 - Used different models to train the dataset and used MLFlow to track all the models and parameters.
 - Used Flask to make API based on Input data.
-

Education

Guru Gobind Singh Indraprastha University

Aug, 2015 – July, 2019

Bachelor of Technology

Used cosine similarity to match the user queries with FAQ'S.

- Selecting the model with better threshold between cosine similarity and zero shot classification.
- Used Flask to make API based with Input Queries.

Template Recommender | *Python,MySQL,Flask,MLFlow*

- Made a Template Recommender system for customer support.
- Used different models to train the dataset and used MLFlow to track all the models and parameters.
- Used Flask to make API based on Input data.

Education

Guru Gobind Singh Indraprastha University

Bachelor of Technology

Aug, 2015 – July, 2019

Delhi, India
